10 Interesting Cheetah Facts

Get ready to meet one seriously fierce, fast and ferocious feline with these fascinating cheetah facts!

- 1) Nearly all wild cheetahs can be found in sub-Saharan Africa, where they roam open, grassy Savannah plains and open forests. A small population lives in northeastern Iran, although only a few dozen remain here.
- 2) These big cats' bodies grow to between 1.1m and 1.4m meters long, plus a tail measuring 65cm to 80cm. Their weight ranges from 34kg to 54kg, males being slightly heavier.
- 3) Cheetahs have a pale yellow coat with black dots on the upper parts, and are white on the underbelly. Their faces are distinguished by prominent, black lines that curve from the inner corner of each eye to the outer corners of the mouth.
- 4) The fastest land animal in the world, a cheetah can reach 112km/h in just three seconds – that's faster than a sports car accelerates! Its body has evolved for speed, with long legs, an elongated spine, adapted claws to grip the ground and a long tail for balance.
- 5) Cheetahs are carnivores and live off other animals they find on Africa's plains, including rabbits, warthogs, springboks, gazelles and birds.
- 6) These fierce felines hunt during the day to avoid competition from other powerful

predators such as lions, hyenas and leopards. And boy, can they hunt! First, they use their exceptional eyesight to scan their surroundings before quietly stalking their chosen prey. Then, when the time is right, they sprint from cover, knock down their victim and kill it with a bite to the throat.

7) As sprinting at such mega speeds uses a lot of energy, a cheetah chase is usually limited to 200-300m, and lasts less than a minute.

8) Social animals, cheetahs are usually found in groups, consisting of either a mother and her young, siblings (who stay together for around six months after leaving the mother) or a coalition of males who live and hunt together. Adult females, however, tend to be solitary and only meet with males to mate.

9) Females usually give birth to between 2-8 cubs at a time. She nurses her youngsters in a lair hidden by tall vegetation, until they are 16-24 months old and able to look after themselves.

10) Sadly, this beautiful animal is threatened by loss of habitat and prey, as well as conflict with humans.

Alphabet Praise

Although things are not perfect

God is forever able

Because of trial or pain

Hold on to what you know

Continue in thanksgiving

Imagine life without His love

Do not begin to blame

Joy would cease to be

Even when the times are hard

Keep thanking Him for all the things

Fierce winds are bound to blow

Love imparts to thee

Move out of "Camp Complaining"	Until we see Him coming
No weapon that is known	Victorious in the sky
On earth can yield the power	We'll run the race with gratitude
Praise can do alone	Xalting God most high
Quit looking at the future	Yes, there'll be good times and yes some will be bad, but...
Redeem the time at hand	Zion waits in glory...where none are ever sad!
Start every day with worship	
To "thank" is a command	- Author Unknown
